

ARB COMBINATION WINCH, NON-WINCH BULL BAR TO SUIT CHEVROLET SILVERADO 03 ON 1500 MODELS.

PRODUCT No. 3462020, WITH FITTING KIT 3562040

WARNING

FOR VEHICLES EQUIPPED WITH SRS AIRBAG

WHEN INSTALLED IN ACCORDANCE WITH THESE INSTRUCTIONS, THE FRONT PROTECTION BAR DOES NOT AFFECT OPERATION OF THE SRS AIRBAG.

TAKE NOTE OF THE FOLLOWING:

- THIS PRODUCT MUST BE INSTALLED EXACTLY AS PER THESE INSTRUCTIONS USING ONLY THE HARDWARE SUPPLIED.
- IN THE EVENT OF DAMAGE TO ANY BULL BAR COMPONENT, CONTACT YOUR NEAREST AUTHORISED ARB STOCKIST. REPAIRS OR MODIFICATIONS TO THE IMPACT ABSORPTION SYSTEM MUST NOT BE ATTEMPED.
- DO NOT USE THIS PRODUCT FOR ANY VEHICLE MAKE OR MODEL, OTHER THAN THOSE SPECIFIED BY ARB.
- DO NOT REMOVE LABELS FROM THIS BULL BAR.
- THIS PRODUCT OR ITS FIXING MUST NOT BE MODIFIED IN ANY WAY.

Note :

- This bull bar is suitable for Warn 9,500-16,500lb winches.
- Fog light provisions are in lower pan area of bull bar. IPF840FYS lights are suitable for this location.

Tools Required

Metric Spanner and Socket set	Allen key set
Phillips head screwdriver	Dia 15/64", 10.0 and 12.0mm drill bits
Electric drill 13mm chuck	Sikaflex 227 adhesive, black color

11/10/05	Page 1 of 14	3783176
If you have any queries regarding the installation of this p	product please contact the distributor from whom it was purchased, or	alternatively the ARB office in your state.

NOTE: Shipping brackets connecting bull bar to pallet and associated fasteners are not intended to be reused in fitted bar assembly.

ASSEMBLY SEQUENCE FOR WINCH BUMPER.		
1. FITTING MOUNTING BRACKETS		
	1.1 Remove the plastic shroud above the radiator as shown, by releasing plastic clips	
	1.2 To remove the grille, carefully push the retainer spring clips back out in four places behind grille. Pull outer bar from between headlights forward to release from clip into end of guard. <i>NOTE: It may be necessary to remove top headlights to gain access to these clips if you cannot release them easily.</i>	
	1.3 Remove bumper by undoing four bolts from above and behind bumper then two bolts securing bumper to wing support braces from under and behind forward of wheel arch area.	

	1.7 Fit cage nuts to bracket tangs as shown
	1.8 Position the mount brackets as shown on the ends of the chassis rails (LHS shown). Loosely fit an M12 bolt and washer set to top bolt position and lower position as shown finger tight only.
Inserting sleeve Sleeve in position	1.9 Partly withdraw M12 x 150 bolt and fit crush sleeve over bolt body inside chassis as shown. Fit flat and spring washers, and nut. Do not tighten.

2. PREPARING BULL BAR FOR FITTING		
	2.1	Remove lights from cartons and then remove screws and speed nuts from each light. These fasteners are not to be reused – new screws are supplied in the fitting kit.
	2.2	Insert nylon nuts into square holes in light brackets inside wing area
	2.3	Fit lights using screws supplied in fitting kit, taking note of RH and LH light bodies, they are different and must be placed on the correct side of bull bar.
	2.4	Fit large eyebolt nut into the plate on the inside of the bar.

3. IF FITTING WINCH		
	3.1	From the factory the winch handle should be in the position as shown. Remove cable retaining band and position cable loop so it will go through roller fairlead when it is placed in bull bar.
	•	 3.2 Fit control box to pan: For 9500-12000lb winches, use universal control box bracket supplied, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts.
	•	For 15000lb winches, use Warn supplied control box bracket, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts.

<image/>	 For 16500lb winches, apply Sikaflex (or similar product) to rear of control box trim plate from fitting kit (note orientation critical to suit final position with control box profile in pan opening). Position trim plate on top of pan centrally about control box opening and line up with mount slots. Fasten in position with 2 x M10 cap screws and flange nuts from fitting kit.
- ORIGINAL - FRONT DF HOLE - VEHICLE	3.3 On some models, the roller fair lead must be drilled prior to fitment.
	Mark out as shown and using a 13.0 mm drill bit, drill two holes as shown in diagram.
VEW HOLE	
	 3.4 Viewed from front of vehicle the winch clutch (handle) must be positioned on the LH side (same side as smaller square access hole in pan). Cable must spool from the bottom of winch. Draw off enough cable so cable crimp can be pulled through roller fairlead. <i>Hint: If crimp is too large to fit through, remove a circlip from a horizontal roller, partially remove the shaft so roller gap is increased and feed cable and crimp through. Refit shaft and circlip.</i> Bolt winch in position with the roller fair lead in place. <i>Hint: To increase access to mount bolts in front of roller fairlead, remove circlips from</i>
	front of roller fairlead, remove circlips from bottom of each vertical roller shaft, push shaft up so roller can be dislodged sideways. Do up bolts in fairlead and winch, then refit circlip.
	Connect the winch control box cables to the winch motor. Refer to the Warn handbook for additional information. Connect the long winch + & - cables to the vehicle <u>after</u> the bar is installed. Refer to the Warn winch manual for vehicle wiring instructions.

Fitting with winch, number plate above RFL	3.5 Fitting number plate – with winch Bolt number plate to the bracket with the M6 X 16mm bolts and M6 flange nuts through the lower holes of the number plate.
Fitting without winch, number plate covers RFL opening	If not fitting winch. Bolt the number plate through the top holes using M6 X 16mm bolts and M6 flange nuts.
	 3.6 If not fitting winch cont. Wrap rubber extrusion around winch cover. Place washers over the winch cover fixing holes located on the top middle face of the winch bumper. Place the winch cover on top of the winch bumper inline with the mount holes. Bolt together using the M6 button head stainless steel screws and M6 nuts.

4. FITTING BULL BAR TO VEHICLE

	 4.1 Using two people, three if winch fitted, position the bar assembly on the vehicle mounts. Bolt the bar to the mounts using M12 bolts, large flat washers and spring washers. Align the bar to the profile of the guards, grille and light profile and tighten all bolts. Using the M10 pilot holes in mount brackets, drill pinning hole through uprights on bull bar. Fit M10 screw, washer set and flange nut and do up tight.
TRIM APPROXIMATELY TO THIS LINE	4.2 Trim excess plastic inner guard molding to meet lower profile of bull bar wing. Note the position of water bottle on LHS of vehicle and trim neatly around it.
	 4.3 Fit washer bottle protection frame to lower mounts where original bumper stabiliser arms were located using 2 x M10 x 30 bolt and washer sets. Fit off the upper bracket to inner wing area of bull bar as shown using M8 x 25 bolts and washer sets. NOTE: The 2 x M8 cage nuts should be in place from step 2.7.
	4.4 Fit inner guard plates to ends of bull bar wings and fasten with M6 black screws and washers.

With the winch cable through the roller fair lead. Mount the hook to the end of the cable.

positions are on lower pan area between winch opening and high lift jack position.

Refer to the Warn winch manual for vehicle wiring instructions.

Ensure that electrical cables are installed well clear of sharp, hot or moving objects. Secure the winch cables to the vehicle and winch bumper with the supplied cable ties.

ARB COMBINATION WINCH, NON-WINCH BULL BAR TO SUIT CHEVROLET SILVERADO 03 ON 1500 MODELS.

PRODUCT No. 3462020, WITH FITTING KIT 3562040

WARNING

FOR VEHICLES EQUIPPED WITH SRS AIRBAG

WHEN INSTALLED IN ACCORDANCE WITH THESE INSTRUCTIONS, THE FRONT PROTECTION BAR DOES NOT AFFECT OPERATION OF THE SRS AIRBAG.

TAKE NOTE OF THE FOLLOWING:

- THIS PRODUCT MUST BE INSTALLED EXACTLY AS PER THESE INSTRUCTIONS USING ONLY THE HARDWARE SUPPLIED.
- IN THE EVENT OF DAMAGE TO ANY BULL BAR COMPONENT, CONTACT YOUR NEAREST AUTHORISED ARB STOCKIST. REPAIRS OR MODIFICATIONS TO THE IMPACT ABSORPTION SYSTEM MUST NOT BE ATTEMPED.
- DO NOT USE THIS PRODUCT FOR ANY VEHICLE MAKE OR MODEL, OTHER THAN THOSE SPECIFIED BY ARB.
- DO NOT REMOVE LABELS FROM THIS BULL BAR.
- THIS PRODUCT OR ITS FIXING MUST NOT BE MODIFIED IN ANY WAY.

Note :

- This bull bar is suitable for Warn 9,500-16,500lb winches.
- Fog light provisions are in lower pan area of bull bar. IPF840FYS lights are suitable for this location.

Tools Required

Metric Spanner and Socket set	Allen key set
Phillips head screwdriver	Dia 15/64", 10.0 and 12.0mm drill bits
Electric drill 13mm chuck	Sikaflex 227 adhesive, black color

11/10/05	Page 1 of 14	3783176
If you have any queries regarding the installation of this p	product please contact the distributor from whom it was purchased, or	alternatively the ARB office in your state.

NOTE: Shipping brackets connecting bull bar to pallet and associated fasteners are not intended to be reused in fitted bar assembly.

ASSEMBLY SEQUENCE FOR WINCH BUMPER.		
1. FITTING MOUNTING BRACKETS		
	1.1 Remove the plastic shroud above the radiator as shown, by releasing plastic clips	
	1.2 To remove the grille, carefully push the retainer spring clips back out in four places behind grille. Pull outer bar from between headlights forward to release from clip into end of guard. <i>NOTE: It may be necessary to remove top headlights to gain access to these clips if you cannot release them easily.</i>	
	1.3 Remove bumper by undoing four bolts from above and behind bumper then two bolts securing bumper to wing support braces from under and behind forward of wheel arch area.	

	1.7 Fit cage nuts to bracket tangs as shown
	1.8 Position the mount brackets as shown on the ends of the chassis rails (LHS shown). Loosely fit an M12 bolt and washer set to top bolt position and lower position as shown finger tight only.
Inserting sleeve Sleeve in position	1.9 Partly withdraw M12 x 150 bolt and fit crush sleeve over bolt body inside chassis as shown. Fit flat and spring washers, and nut. Do not tighten.

2. PREPARING BULL BAR FOR FITTING		
	2.1	Remove lights from cartons and then remove screws and speed nuts from each light. These fasteners are not to be reused – new screws are supplied in the fitting kit.
	2.2	Insert nylon nuts into square holes in light brackets inside wing area
	2.3	Fit lights using screws supplied in fitting kit, taking note of RH and LH light bodies, they are different and must be placed on the correct side of bull bar.
	2.4	Fit large eyebolt nut into the plate on the inside of the bar.

3. IF FITTING	W	INCH
	3.1	From the factory the winch handle should be in the position as shown. Remove cable retaining band and position cable loop so it will go through roller fairlead when it is placed in bull bar.
	•	 3.2 Fit control box to pan: For 9500-12000lb winches, use universal control box bracket supplied, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts.
	•	For 15000lb winches, use Warn supplied control box bracket, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts.

<image/>	 For 16500lb winches, apply Sikaflex (or similar product) to rear of control box trim plate from fitting kit (note orientation critical to suit final position with control box profile in pan opening). Position trim plate on top of pan centrally about control box opening and line up with mount slots. Fasten in position with 2 x M10 cap screws and flange nuts from fitting kit.
- ORIGINAL - FRONT DF HOLE - VEHICLE	3.3 On some models, the roller fair lead must be drilled prior to fitment.
	Mark out as shown and using a 13.0 mm drill bit, drill two holes as shown in diagram.
VEW HOLE	
	 3.4 Viewed from front of vehicle the winch clutch (handle) must be positioned on the LH side (same side as smaller square access hole in pan). Cable must spool from the bottom of winch. Draw off enough cable so cable crimp can be pulled through roller fairlead. <i>Hint: If crimp is too large to fit through, remove a circlip from a horizontal roller, partially remove the shaft so roller gap is increased and feed cable and crimp through. Refit shaft and circlip.</i> Bolt winch in position with the roller fair lead in place. <i>Hint: To increase access to mount bolts in front of roller fairlead, remove circlips from</i>
	front of roller fairlead, remove circlips from bottom of each vertical roller shaft, push shaft up so roller can be dislodged sideways. Do up bolts in fairlead and winch, then refit circlip.
	Connect the winch control box cables to the winch motor. Refer to the Warn handbook for additional information. Connect the long winch + & - cables to the vehicle <u>after</u> the bar is installed. Refer to the Warn winch manual for vehicle wiring instructions.

Fitting with winch, number plate above RFL	3.5 Fitting number plate – with winch Bolt number plate to the bracket with the M6 X 16mm bolts and M6 flange nuts through the lower holes of the number plate.
Fitting without winch, number plate covers RFL opening	If not fitting winch. Bolt the number plate through the top holes using M6 X 16mm bolts and M6 flange nuts.
	 3.6 If not fitting winch cont. Wrap rubber extrusion around winch cover. Place washers over the winch cover fixing holes located on the top middle face of the winch bumper. Place the winch cover on top of the winch bumper inline with the mount holes. Bolt together using the M6 button head stainless steel screws and M6 nuts.

4. FITTING BULL BAR TO VEHICLE

	 4.1 Using two people, three if winch fitted, position the bar assembly on the vehicle mounts. Bolt the bar to the mounts using M12 bolts, large flat washers and spring washers. Align the bar to the profile of the guards, grille and light profile and tighten all bolts. Using the M10 pilot holes in mount brackets, drill pinning hole through uprights on bull bar. Fit M10 screw, washer set and flange nut and do up tight.
TRIM APPROXIMATELY TO THIS LINE	4.2 Trim excess plastic inner guard molding to meet lower profile of bull bar wing. Note the position of water bottle on LHS of vehicle and trim neatly around it.
	 4.3 Fit washer bottle protection frame to lower mounts where original bumper stabiliser arms were located using 2 x M10 x 30 bolt and washer sets. Fit off the upper bracket to inner wing area of bull bar as shown using M8 x 25 bolts and washer sets. NOTE: The 2 x M8 cage nuts should be in place from step 2.7.
	4.4 Fit inner guard plates to ends of bull bar wings and fasten with M6 black screws and washers.

With the winch cable through the roller fair lead. Mount the hook to the end of the cable.

positions are on lower pan area between winch opening and high lift jack position.

Refer to the Warn winch manual for vehicle wiring instructions.

Ensure that electrical cables are installed well clear of sharp, hot or moving objects. Secure the winch cables to the vehicle and winch bumper with the supplied cable ties.

ARB COMBINATION WINCH, NON-WINCH BULL BAR TO SUIT CHEVROLET SILVERADO 03 ON 1500HD-2500 MODELS.

PRODUCT No. 3462020, WITH FITTING KIT 3562050

WARNING

FOR VEHICLES EQUIPPED WITH SRS AIRBAG

WHEN INSTALLED IN ACCORDANCE WITH THESE INSTRUCTIONS, THE FRONT PROTECTION BAR DOES NOT AFFECT OPERATION OF THE SRS AIRBAG.

TAKE NOTE OF THE FOLLOWING:

- THIS PRODUCT MUST BE INSTALLED EXACTLY AS PER THESE INSTRUCTIONS USING ONLY THE HARDWARE SUPPLIED.
- IN THE EVENT OF DAMAGE TO ANY BULL BAR COMPONENT, CONTACT YOUR NEAREST AUTHORISED ARB STOCKIST. REPAIRS OR MODIFICATIONS TO THE IMPACT ABSORPTION SYSTEM MUST NOT BE ATTEMPED.
- DO NOT USE THIS PRODUCT FOR ANY VEHICLE MAKE OR MODEL, OTHER THAN THOSE SPECIFIED BY ARB.
- DO NOT REMOVE LABELS FROM THIS BULL BAR.
- THIS PRODUCT OR ITS FIXING MUST NOT BE MODIFIED IN ANY WAY.

Note :

- This bull bar is suitable for Warn 9,500-16,500lb winches.
- Fog light provisions are in lower pan area of bull bar. IPF840FYS lights are suitable for this location.

Tools Required

Metric Spanner and Socket set	Allen key set
Phillips head screwdriver	Dia 15/64", 10.0 and 12.0mm drill bits
Electric drill 13mm chuck	Sikaflex 227 adhesive, black color

NOTE: Shipping brackets connecting bull bar to pallet and associated fasteners are not intended to be reused in fitted bar assembly.

ASSEMBLY SEQUENCE FOR WINCH BUMPER.			
1. FITTING MOUNTING BRACKETS			
	1.1 Remove plastic shroud above radiator as shown, by releasing plastic clips		
	1.2 To remove the grille, carefully push the retainer spring clips back out in four places behind grille. Pull outer bar from between headlights forward to release from clip into end of guard. <i>NOTE: It may be necessary to remove top headlights to gain access to these clips if you cannot release them easily.</i>		
	1.3 Remove bumper by undoing four bolts from above and behind bumper then two bolts securing bumper to wing support braces from under and behind forward of wheel arch area.		

1.4 Remove and replace tow hooks on opposite chassis sides. Note, the hole underneath the chassis may need to be elongated to allow the bolt to fit into the rear underside position. Leave the outer bolt off.
1.5 Fit the mount brackets as shown, to the end of the chassis rails, top M12 bolt and washer set as shown finger tight only.
1.6 Slide in 'L' shaped packer oriented as shown
 1.7 Fit M12 bolt, spring washer and Dia 13.0x30x3 large washer into tow hook thread, insert M12 bolt and washer set in pinning hole to line up packer hole. Tighten up lower bolt. Remove loose bolt from pinning hole and drill through using Dia12.0 drill. Then insert and do up M12 bolt set.

1.8 Drill pinning hole in top position as shown then insert and do up M12 bolt set.
1.9 Tighten up all bolts
1.10 Check that tops of brackets are horizontal and that brackets are parallel to each other. If not release bolts and make necessary adjustments.Refit grille and shroud.

2. PREPARING BULL BAR FOR FITTING		
	2.1	Remove lights from cartons and then remove screws and speed nuts from each light. These fasteners are not to be reused – new screws are supplied in the fitting kit.
	2.2	Insert nylon nuts into square holes in light brackets inside wing area
	2.3	Fit lights using screws supplied in fitting kit, taking note of RH and LH light bodies, they are different and must be placed on the correct side of bull bar.

2.4 Fit large eyebolt nut into the plate on the inside of the bar.
 2.5 Screw in the eyebolt using the large washer. Eyebolt can be positioned to sit vertically by rotating the large nut to the correct position. NOTE: EYEBOLTS SHOULD BE REMOVED FOR SAFETY REASONS WHEN TRAVELLING ON PUBLIC ROADS.
2.6 When the large nut is in its final position, secure with the nut retaining bracket using an M6 bolt, washer and flange nut.
2.7 Secure the number plate bracket using M6 bolts, flat washers and flange nuts. Attach the longer side to the bullbar and the shorter side to the number plate.

3. IF FITTING WINCH		
	 3.1 From the factory the winch handle should be in the position as shown. Remove cable retaining band and position cable loop so it will go through roller fairlead when it is placed in bull bar. 	
	 3.2 Fit control box to pan: For 9500-12000lb winches, use universal control box bracket supplied, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts. 	
<image/>	 For 15000lb winches, use Warn supplied control box bracket, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts. 	

	 For 16500lb winches, apply Sikaflex (or similar product) to rear of control box trim plate from fitting kit (note orientation critical to suit final position with control box profile in pan opening). Position trim plate on top of pan centrally about control box opening and line up with mount slots. Fasten in position with 2 x M10 cap screws and flange nuts from fitting kit.
- DRIGINAL - FRONT DF HOLE VEHICLE	3.3 On some models, the roller fair lead must be drilled prior to fitment.
	Mark out as shown and using a 13.0 mm drill bit, drill two holes as shown in diagram.
HDLE	
	 3.4 Viewed from front of vehicle the winch clutch (handle) must be positioned on the LH side (same side as smaller square access hole in pan). Cable must spool from the bottom of winch. Draw off enough cable so cable crimp can be pulled through roller fairlead. <i>Hint: If crimp is too large to fit through, remove a circlip from a horizontal roller, partially remove the shaft so roller gap is increased and feed cable and crimp through. Refit shaft and circlip.</i>
	Bolt winch in position with the roller fair lead in place.
	Hint: To increase access to mount bolts in front of roller fairlead, remove circlips from bottom of each vertical roller shaft, push shaft up so roller can be dislodged sideways. Do up bolts in fairlead and winch, then refit circlip.
	Connect the winch control box cables to the winch motor. Refer to the Warn handbook for additional information. Connect the long winch + & - cables to the vehicle after the bar is installed. Refer to the Warn winch manual for vehicle wiring instructions.

Fitting with winch, number plate above RFL	3.5 Fitting number plate – with winch Bolt number plate to the bracket with the M6 X 16mm bolts and M6 flange nuts through the lower holes of the number plate.
Fitting without winch, number plate covers RFL opening	If not fitting winch. Bolt the number plate through the top holes using M6 X 16mm bolts and M6 flange nuts.
	3.6 <u>If not fitting winch cont.</u> Wrap rubber extrusion around winch
	cover. Place washers over the winch cover fixing holes located on the top middle face of the winch bumper. Place the winch cover on top of the winch
	bumper inline with the mount holes. Bolt together using the M6 button head stainless steel screws and M6 nuts.
View from above, rear of bull bar	Starmess steer screws and wo nuts.
	3.7 Fit the M8 cage nuts to the square holes in the wing brace on the LHS (washer bottle side) of the bull bar. The body of the cage nuts are to be on the inside of the brace. These nuts are to be used to fasten the washer bottle protection arm to the bull bar.

4. FITTING BULL BAR TO VEHICLE

	4.1 Using two people, three if winch fitted, position the bar assembly on the vehicle mounts.
	Bolt the bar to the mounts using M12 bolts, large flat washers and spring washers. Align the bar to the profile of the guards, grille and light profile and tighten all bolts.
	Using the M10 pilot holes in mount brackets, drill pinning hole through uprights on bull bar. Fit M10 screw, washer set and flange nut and do up tight.
TRIM APPROXIMATELY TO THIS LINE	4.2 Trim excess plastic inner guard molding to meet lower profile of bull bar wing. Note the position of water bottle on LHS of vehicle and trim neatly around it.
	 4.3 Fit washer bottle protection frame to lower mounts where original bumper stabiliser arms were located using 2 x M10 x 30 bolt and washer sets. Fit off the upper bracket to inner wing area of bull bar as shown using M8 x 25 bolts and washer sets. NOTE: The 2 x M8 cage nuts should be in place from step 2.7.

4.4 Fit inner guard plates to ends of bull bar wings and fasten with M6 black screws and washers.
4.5 <u>If fitting with winch</u>With the winch cable through the roller fair lead. Mount the hook to the end of the cable.
 4.6 Wire up the indicator and clearance lamp assemblies. Use scotch locks to splice cables to existing indicator and clearance lamp wiring and cable tie securely. If fog lights are to be installed, mount positions are on lower pan area between winch opening and high lift jack position. Refer to the Warn winch manual for vehicle wiring instructions. Ensure that electrical cables are installed well clear of sharp, hot or moving objects. Secure the winch cables to the vehicle and winch bumper with the supplied cable ties.

ARB COMBINATION WINCH, NON-WINCH BULL BAR TO SUIT CHEVROLET SILVERADO 03 ON 2500HD-3500 MODELS.

PRODUCT No. 3462020, WITH FITTING KIT 3562060

WARNING

FOR VEHICLES EQUIPPED WITH SRS AIRBAG

WHEN INSTALLED IN ACCORDANCE WITH THESE INSTRUCTIONS, THE FRONT PROTECTION BAR DOES NOT AFFECT OPERATION OF THE SRS AIRBAG.

TAKE NOTE OF THE FOLLOWING:

- THIS PRODUCT MUST BE INSTALLED EXACTLY AS PER THESE INSTRUCTIONS USING ONLY THE HARDWARE SUPPLIED.
- IN THE EVENT OF DAMAGE TO ANY BULL BAR COMPONENT, CONTACT YOUR NEAREST AUTHORISED ARB STOCKIST. REPAIRS OR MODIFICATIONS TO THE IMPACT ABSORPTION SYSTEM MUST NOT BE ATTEMPED.
- DO NOT USE THIS PRODUCT FOR ANY VEHICLE MAKE OR MODEL, OTHER THAN THOSE SPECIFIED BY ARB.
- DO NOT REMOVE LABELS FROM THIS BULL BAR.
- THIS PRODUCT OR ITS FIXING MUST NOT BE MODIFIED IN ANY WAY.

Note :

- This bull bar is suitable for Warn 9,500-16,500lb winches.
- Fog light provisions are in lower pan area of bull bar. IPF840FYS lights are suitable for this location.

NOTE: Shipping brackets connecting bull bar to pallet and associated fasteners are not intended to be reused in fitted bar assembly.

ASSEMBLY SEQUENCE FOR WINCH BUMPER.		
1. FITTING MOUNTING BRACKETS		
	1.1 Remove plastic shroud above radiator as shown, by releasing plastic clips	
	1.2 To remove the grille, carefully push the retainer spring clips back out in four places behind grille. Pull outer bar from between headlights forward to release from clip into end of guard. <i>NOTE: It may be necessary to remove top headlights to gain access to these clips if you cannot release them easily</i>	
	1.3 Remove bumper by undoing four bolts from above and behind bumper then two bolts securing bumper to wing support braces from under and behind forward of wheel arch area.	

1.4 Remove and replace tow hooks on opposite chassis sides. Note, the hole underneath the chassis may need to be elongated to allow the bolt to fit into the rear underside position. Leave the outer bolt off.
1.5 Fit the mount brackets as shown, to the end of the chassis rails, top M12 bolt and washer set as shown finger tight only.
1.6 Slide in 'L' shaped packer oriented as shown
 1.7 Fit M12 bolt, spring washer and Dia 13.0x30x3 large washer into tow hook thread, insert M12 bolt and washer set in pinning hole to line up packer hole. Tighten up lower bolt. Remove loose bolt from pinning hole and drill through using Dia12.0 drill. Then insert and do up M12 bolt set.

1.8 Remove loose bolt from pinning hole and drill through using Dia12.0 drill. Then insert and do up M12 bolt set.
1.9 Drill pinning hole in top position as shown then insert and do up M12 bolt set.
1.10 Tighten up all bolts

2. PREPARING BULL BAR FOR FITTING		
	 2.1 Remove lights from cartons and then remove screws and speed nuts from each light. These fasteners are not to be reused – new screws are supplied in the fitting kit. 	
	2.2 Insert nylon nuts into square holes in light brackets inside wing area	
	2.3 Fit lights using screws supplied in fitting kit, taking note of RH and LH light bodies, they are different and must be placed on the correct side of bull bar.	

2.4 Fit large eyebolt nut into the plate on the inside of the bar.
 2.5 Screw in the eyebolt using the large washer. Eyebolt can be positioned to sit vertically by rotating the large nut to the correct position. NOTE: EYEBOLTS SHOULD BE REMOVED FOR SAFETY REASONS WHEN TRAVELLING ON PUBLIC ROADS.
2.6 When the large nut is in its final position, secure with the nut retaining bracket using an M6 bolt, washer and flange nut.
2.7 Secure the number plate bracket using M6 bolts, flat washers and flange nuts. Attach the longer side to the bullbar and the shorter side to the number plate.

3. IF FITTING WINCH		
3.	 As supplied the winch handle should be in the position as shown. Remove cable retaining band and position cable loop so it will go through roller fairlead when it is placed in bull bar. 	
	 3.2 Fit control box to pan: For 9500-12000lb winches, use universal control box bracket supplied, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts. 	
	 For 15000lb winches, use Warn supplied control box bracket, attaching to rear of control box mount studs. Slide bracket flange under pan and align with mount slots. Fasten in position with 2 x M10 cap screws, black washers and flange nuts. 	

	 For 16500lb winches, apply Sikaflex (or similar product) to rear of control box trim plate from fitting kit (note orientation critical to suit final position with control box profile in pan opening). Position trim plate on top of pan centrally about control box opening and line up with mount slots. Fasten in position with 2 x M10 cap screws and flange nuts from fitting kit.
HOLE FRONT DF	3.3 On some models, the roller fair lead must be drilled prior to fitment.
	Mark out as shown and using a 13.0 mm drill bit, drill two holes as shown in diagram.
HDLE	
	 3.4 Viewed from front of vehicle the winch clutch (handle) must be positioned on the LH side (same side as smaller square access hole in pan). Cable must spool from the bottom of winch. Draw off enough cable so cable crimp can be pulled through roller fairlead. <i>Hint: If crimp is too large to fit through, remove a circlip from a horizontal roller, partially remove the shaft so roller gap is increased and feed cable and crimp through. Refit shaft and circlip.</i> Bolt winch in position with the roller fair lead in
	place.
	Hint: To increase access to mount bolts in front of roller fairlead, remove circlips from bottom of each vertical roller shaft, push shaft up so roller can be dislodged sideways. Do up bolts in fairlead and winch, then refit circlip.
	Connect the winch control box cables to the winch motor. Refer to the Warn handbook for additional information. Connect the long winch + & - cables to the vehicle after the bar is installed. Refer to the Warn winch manual for vehicle wiring instructions.

WASHINGTON STE	3.5 Fitting number plate – with winch
A57939X EVERIGHEN STATE	Bolt number plate to the bracket with the M6 X 16mm bolts and M6 flange nuts through the lower holes of the number plate.
Fitting with winch, number plate above RFL	
	If not fitting winch.
WASHINGTON DEFENSION A57939X EVERGIEREM STATE	Bolt the number plate through the top holes using M6 X 16mm bolts and M6 flange nuts.
Fitting without winch, number plate covers RFL opening	
	3.6 If not fitting winch cont.
	Wrap rubber extrusion around winch cover.
	Place washers over the winch cover fixing holes located on the top middle face of the winch bumper.
	Place the winch cover on top of the winch bumper inline with the mount holes.
	Bolt together using the M6 button head stainless steel screws and M6 nuts.
View from above, rear of bull bar	

4. FITTING BULL BAR TO VEHICLE

	 4.1 Using two people, three if winch fitted, position the bar assembly on the vehicle mounts. Bolt the bar to the mounts using M12 bolts, large flat washers and spring washers. Align the bar to the profile of the guards, grille and light profile and tighten all bolts. Using the M10 pilot holes in mount brackets, drill pinning hole through uprights on bull bar. Fit M10 screw, washer set and flange nut and do up tight.
TRIM APPROXIMATELY TO THIS LINE	4.2 Trim excess plastic inner guard molding to meet lower profile of bull bar wing. Note the position of water bottle on LHS of vehicle and trim neatly around it.
	4.3 Fit inner guard plates to ends of bull bar wings and fasten with M6 black screws and washers.
	4.4 <u>If fitting with winch</u>With the winch cable through the roller fair lead. Mount the hook to the end of the cable.

4.5 Wire up the indicator and clearance lamp assemblies. Use scotch locks to splice cables to existing indicator and clearance lamp wiring and cable tie securely.

If fog lights are to be installed, mount positions are on lower pan area between winch opening and high lift jack position.

Refer to the Warn winch manual for vehicle wiring instructions.

Ensure that electrical cables are installed well clear of sharp, hot or moving objects. Secure the winch cables to the vehicle and winch bumper with the supplied cable ties.
